

## ESOS Phase 2 Case Study - Enovert

### The Company

Enovert runs 19 landfill gas sites in England and Wales with a Head office in Stafford. Landfill gas is used to power gas engines with all the electricity exported. Another large energy user is gas oil for heavy site vehicles and some static machinery.

### Services provided

Mulholland Energy were working on behalf of Energy Oasis who have Enovert as a client. The company needed ESOS conducted for Phase 2.

John Mulholland and Martin Berry visited four sites and conducted Energy Audit Reports for:

- Two landfill gas compounds on landfill gas and imported electricity
- Gas oil use in heavy earth-moving vehicles and static plant

In addition, the other following reports comprised the ESOS Evidence Pack:

- ESOS Summary Report
- ESOS Notification Report

The project was completed for a deadline set by the Environment Agency.

### Client Response

*We needed to engage consultants on our ESOS Compliance work and selected Energy Oasis on the basis that we had a pre-existing relationship and believed they had the necessary expertise. From start to finish, everyone at Energy Oasis moved rapidly to ensure the timescale we set could be achieved. We were very impressed with the dedicated consultants, John Mulholland and Martin Berry, appointed to the project in terms of their planning, communication, and quality, leading us through a number of different complexities in a clear and professional manner. Crucially providing us with absolute comfort they were experts in their fields, which is what made the project so successful.*
